

FAQ
Setting up
Patient registration screen

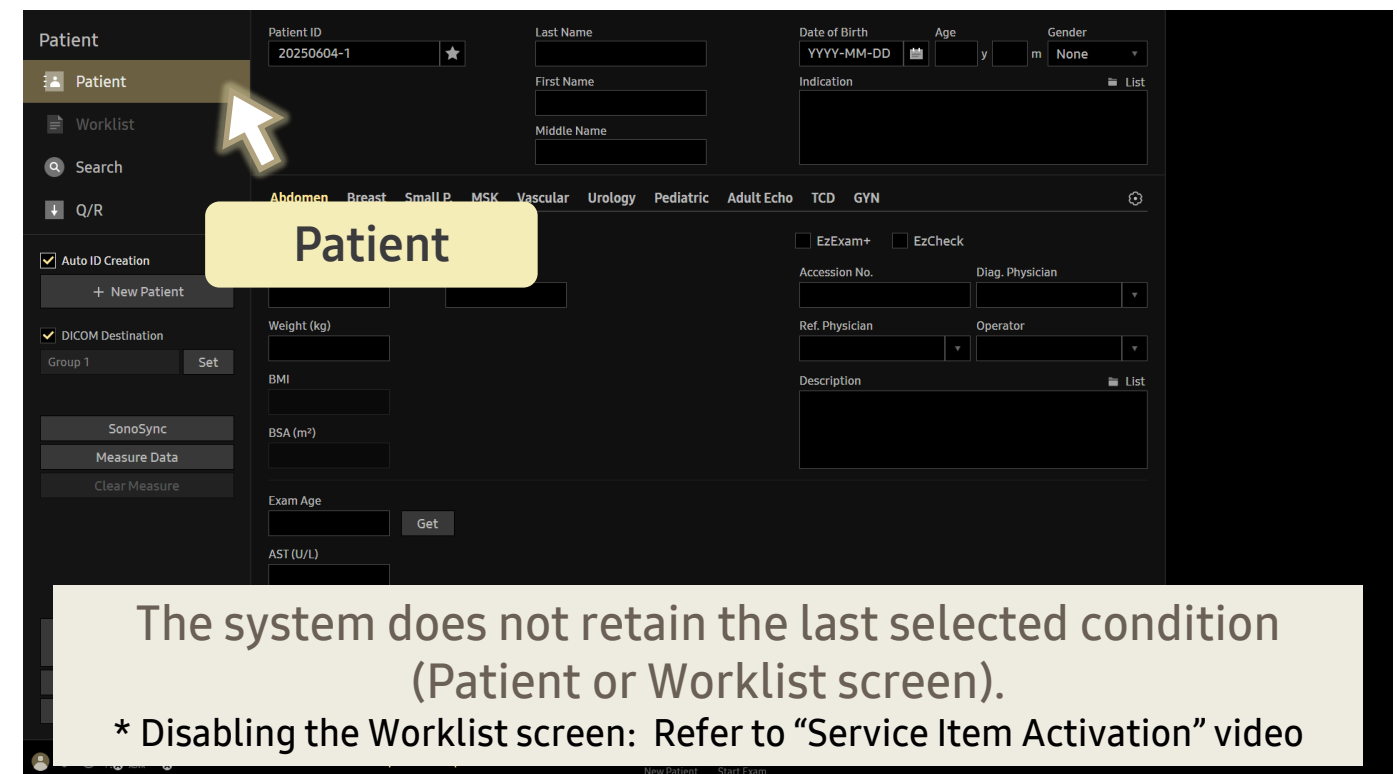

[FAQ – Setting up Patient registration screen]

- **Situation**

The system is integrated with the Worklist. When entering the patient registration screen, I want the manual patient input field to appear first, instead of the Worklist.

- **Solution**

When the Worklist integration is active, the Worklist will appear first. To manually register a patient, Click **Patient**.

* When manually entering patient information, please click Patient each time as needed. If you prefer the **Patient** screen to always appear instead of using the **Worklist**, go to **Setup > Connectivity > DICOM** tab and uncheck the checkbox for the Worklist server.
